SUMMARY

Java Full Stack Developer with professional experience developing backend services and RESTful APIs using Java, Spring Boot, Spring Security, and PostgreSQL. Experienced in building secure role-based applications with JWT-based authentication and RBAC, along with microservice-based backend components. Skilled in integrating React.js and React Native applications with backend services and implementing business logic, request validation, exception handling, database operations, and asynchronous communication using RabbitMQ.

TECHNICAL SKILLS

Languages — Java, Python, JavaScript, SQL

Backend — Spring, Spring Boot, FastAPI, Rest APIs, Microservices

Security — Spring Security, JWT, Role-Based Access control (RBAC)

Frontend — React.js, React Native, HTML5, CSS

Database & Caching — postgresSQL, Redis

ORM & Data Access — Hibernate, JDBC, SQLALchemi

Messaging, Background Processing — RabbitMQ, Kafka

Tools — Docker

Testing — Manual Testing, Automation Tesing

WORK EXPERIENCE

Software Developer, IKRGY Infotech Pvt. Ltd

04/2026 – Present

Hyderabad, Telangana

- Develop and integrate RESTful backend services using Java and Spring Boot to support application workflows and frontend operations.
- Implement authentication and authorization using Spring Security, JWT, and role-based access control (RBAC).
- Develop and maintain microservice-based backend components with PostgreSQL for persistent data management.
- Implement business logic, request validation, exception handling, and structured service layer components to build maintainable backend systems.

Software Developer - Intern, Besant Technologies

08/2025 – 01/2026

Chennai, Tamil Nadu

- Developed full-stack web applications using Java, Spring Boot, React.js, and PostgreSQL as part of a structured full-stack development program.
- Designed and integrated RESTful APIs to establish communication between frontend applications and backend services.
- Implemented business logic, database operations, input validation, exception handling, and authentication flows.
- Debugged application issues and applied structured development practices across implementation, testing, and API integration.

EDUCATION

B.Sc. Chemistry, Government Arts and Science College

2021 – 2024

Sivakasi

CERTIFICATIONS

Java Full Stack Developer Certificate — Besant Technologies

PROJECTS

Integrated College / University Management System, *Scalable Academic & Administrative Management System*

05/2026

Tech Stack : Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, Celery, Pydantic, Casbin, JWT, Microservices

- Developed RESTful backend APIs using Python and FastAPI to support academic and administrative management workflows.
- Implemented modular service-layer business logic, request processing, validation, and database operations using SQLAlchemy and PostgreSQL.
- Implemented role-based and attribute-based access control using Casbin to enforce permissions across different application operations.
- Implemented JWT-based authentication and authorization for securing protected API endpoints.
- Used Redis for application-level caching and Celery for background task processing to support asynchronous application operations.
- Structured backend components using a microservice-oriented architecture to separate application responsibilities and improve maintainability.

Smart Blood Search, Donation & Tracking Management System - In Progress, *Role-based platform for blood requests, donor matching, donation management, and real-time donor tracking.*

09/2026

Tech Stack: Java, Spring Boot, Spring Security, JWT, RabbitMQ, PostgreSQL, React.js, React Native, Microservices

- Developing a role-based blood donation and hospital management platform supporting Super Admin, Platform Admin, Main Hospital Admin, Branch Hospital Admin, and Hospital Staff with hierarchical access control.
- Implementing secure authentication and authorization using Spring Security, JWT, password hashing, mobile OTP verification, and RBAC to control access across platform and hospital workflows.
- Developing Spring Boot microservices and RESTful APIs for core business workflows, with PostgreSQL for persistent data management and structured service-layer architecture.
- Implementing request validation, centralized exception handling, and business-rule processing to improve API reliability and maintainability.
- Using RabbitMQ for asynchronous communication between authentication and notification services, decoupling notification processing from core business operations.
- Building React.js web interfaces for administrative and hospital workflows and a React Native mobile application for donor and hospital staff operations.
